The U.S. Environmental Protection Agency (EPA) has determined that asbestos can cause cancer. To protect citizens from the health hazards presented by airborne asbestos fibers, all building demolitions and many renovation projects within Hamilton County require a permit from the APCB, with the exception of projects involving certain residential buildings and apartments with less than five units. In addition, if asbestos-containing material is present, specific removal, transportation, and disposal techniques may be required.

Isolated Single-Family Dwellings

Demolition of one single-family residential building which has always been used as a residence does not require an APCB permit UNLESS it is being demolished or renovated as part of a larger project that includes demolition or renovation of non-residential buildings, or unless it is demolished along with other single family dwellings as part of the same project during the same calendar or fiscal year. The Bureau must inspect the building to confirm this exemption in advance of the demolition or renovation.

Violations of the asbestos regulations may result in civil penalties for both the property owner and the contractor. Anyone who has questions about the status of a structure should contact the Bureau at (423) 643-5970 before starting demolition or renovation.

Demolitions

Including Renovations Involving Removal of any Load-Supporting Structural Member

You must obtain a permit from the Chattanooga-Hamilton County Air Pollution Control Bureau (APCB) before demolishing part or all of any institutional, commercial or industrial building, apartment buildings with more than four units, or more than one residential structure within the same block or as part of a single project.

You must provide written notice 10 days before demolition occurs even if no asbestos is believed to be present. This notice must include a complete asbestos survey that has been performed by a qualified person.

The permit will be issued to the contractor upon payment of the fee. Demolition cannot begin until the APCB Director issues the permit. The contractor generally pays the fee.

Specific removal, transport and disposal techniques will be required for demolitions if:

There is more than 260 linear feet of friable¹ asbestos-containing material used to insulate pipes or more than 160 square feet of friable asbestos material used to insulate or fireproof any duct, boiler, tank reactor, turbine, furnace or structural member (including ceiling tiles, floor tiles, etc.).

Demolition means:

- wrecking or removing a load-supporting structural member of a facility (this includes any related handling operations)
- the intentional burning of any facility.

Asbestos Fee Schedule*

as of December 17, 2007

*Fees double if work begins without permit

Demolitions and Renovations

Amount of Asbestos Present	Permit Fee
No asbestos present	\$100
1-159 sq ft/1-259 linear ft	\$150
160-299 sq ft/260-299 linear feet	\$250
300-499 sq ft/linear ft	\$400
500-999 sq ft/linear ft	\$550
1,000-1,499 sq ft/linear ft	\$650
1,500– 4,999	\$800
5,000 sq ft/linear ft and up	\$1,000

Renovations

Not Involving Removal of any Load-Supporting Structural Member

You must have a permit to remove:

More than 260 linear feet of friable¹ asbestos-containing material used to insulate pipes or more than 160 square feet of friable asbestos material used to insulate or fireproof any duct, boiler, tank, reactor, turbine, furnace or structural member (including ceiling tiles, floor tiles, etc.) that will be disturbed during the renovation.

If a building will undergo several renovation projects in the course of the year, each of which involves less than 260 linear feet or 160 square feet of friable asbestos material, but when combined will total more than the above amounts, the renovation will require a permit from the Director of the Air Pollution Control Bureau (APCB). In these situations, you can obtain a permit one of two ways:

- (1) Obtain a separate permit for each individual renovation project or
- (2) Provide yearly notification of all renovation projects (call for details at 423-643-5970).

Written notice for renovation projects subject to these regulations must be provided to the Bureau at least 10 days before the project begins. The permit and an invoice for the appropriate notification fee from the Asbestos Fee Schedule will be mailed to the contractor. Renovation cannot begin until the permit has been issued by the Director of the APCB.

¹ Asbestos is friable if it can be crushed or crumbled by hand. Removing otherwise non-friable material in a manner that may release asbestos fibers into the air subjects the process to regulatory requirements.
